

What is Heavy Metal Rocks?

Heavy Metal Rocks is a program that introduces grade 11 and 12 students to a variety of jobs available in the road building, mining and construction industries.

Students learn to operate different types of heavy machinery through hands-on experience. The program is intended for students who have an interest in equipment operation.

"This is a great opportunity for industry to encourage students into careers in skilled trades."

K.W. Journeyman Power Line Technician
