

Board/Authority Authorized Course: Introduction to Welding 11

School District/Independent School Authority Name: <i>Cariboo-Chilcotin</i>	School District/Independent School Authority Number (e.g. SD43, Authority#432): SD 27
Developed by: <i>Tim Westwick</i>	Date Developed: <i>Re-Developed on December 11, 2018</i>
School Name: <i>Lake City Secondary</i>	Principal's Name: <i>Mr. Gregg Gaylord</i>
Superintendent Approval Date (for School Districts only): <i>April 23, 2019</i>	Superintendent Signature (for School Districts only): 
Board/Authority Approval Date: <i>April 23, 2019</i>	Board/Authority Chair Signature: 
Course Name: <i>Introduction to Welding 11</i>	Grade Level of Course: <i>11</i>
Number of Course Credits: 4	Number of Hours of Instruction: 120

Board/Authority Prerequisite(s):
 None.

Special Training, Facilities or Equipment Required:
Applied Design and Skilled Technologies Metal Shop.

Course Synopsis:

This introduction to Welding course will focus on developing knowledge and skills in the welding industry. Students will learn through a more in depth teaching and practice than in other metalworking classes.

Goals and Rationale:

The goal for this introduction to welding course is to have students become immersed into the world of the welding industry. The rationale is that the earlier students are introduced to a specific trade and are able to hone their skills the more likely they are to further their education in the before mentioned trade.

Aboriginal Worldviews and Perspectives:

This course will help students connect with the First Nations Principle of Learning that: Learning is holistic, reflexive, reflective, experiential, and relational (focused on connectedness, on reciprocal relationships, and a sense of place.) By working in a more one on one context with students, the instructor helps guide the student on their journey of developing hand eye coordination skills, trying new techniques, increasing their work ethic, sense of belonging, sense of pride in a job well done and helps transition them into possible career outcomes in the welding industry.

BIG IDEAS

Design for the life cycle includes consideration of social and **environmental impacts**.

Personal design interests require the evaluation and refinement of skills.

Tools and **technologies** can be adapted for specific purposes.

Learning Standards

Curricular Competencies	Content
<p><i>Students are expected to be able to do the following:</i></p> <p>Applied Design</p> <p><i>Understanding context</i></p> <ul style="list-style-type: none"> Engage in a user-centered research and empathetic observation to understand design opportunities <p><i>Defining</i></p> <ul style="list-style-type: none"> Establish a point of view for a chosen design opportunity Identify potential users, intended impacts, and possible unintended negative consequences Make inferences about premises and constraints that define the design space, and develop criteria for success Determine whether activity is collaborative or self-directed <p><i>Ideating</i></p> <ul style="list-style-type: none"> Identify and examine gaps for potential design improvements and innovations Critically analyze how competing social, ethical, and sustainability considerations impact creation and development of solutions Generate ideas to create a range of possibilities and add to others' ideas in ways that create additional possibilities Evaluate suitability of possibilities according to success criteria, constraints, and potential gaps Work with users throughout the design process 	<p><i>Students are expected to know the following:</i></p> <ul style="list-style-type: none"> welding and fabricating projects in industry. welding and machining in the creation of a project identification and selection of suitable metal material for machining or welding processes forms of welding precision measurement procedures for inspection of welding quality interpreting and creating engineered drawings and blueprints threads and fasteners design for the life cycle future career options and opportunities in welding interpersonal skills for interacting with colleagues and clients Safety procedures for welding

Learning Standards (continued)

Curricular Competencies	Content
<p>Prototyping</p> <ul style="list-style-type: none"> Choose an appropriate form, scale, and level of detail for prototyping, and plan procedures Analyze the design for the life cycle and evaluate its impacts Visualize and construct prototypes, making changes to tools, materials, and procedures as needed Record iterations of prototyping <p>Testing</p> <ul style="list-style-type: none"> Identify and communicate with sources of feedback Develop an appropriate test of the prototype, conduct the test, and collect and compile data Evaluate design according to critiques, testing results, and success criteria to make changes <p>Making</p> <ul style="list-style-type: none"> Identify appropriate tools, technologies, materials, processes, cost implications, and time needed Create design, incorporating feedback from self, others, and results from testing of the prototype Use materials in ways that minimize waste <p>Sharing</p> <ul style="list-style-type: none"> Decide how and with whom to share creativity, or share and promote design and processes Share the product with users and critically evaluate its success Critically reflect on plans, products and processes, and identify new design goals Evaluate new possibilities for plans, products and processes, including how they or others might build on them <p>Applied Skills</p> <ul style="list-style-type: none"> Apply safety procedures for themselves, co-workers, and users in both physical and digital environments Individually or collaboratively identify and assess skills needed for design interests 	

Learning Standards (continued)

Curricular Competencies	Content
<ul style="list-style-type: none"> • Demonstrate competency and proficiency in skills at various levels involving manual dexterity and machining and welding • Develop specific plans to learn or refine identified skills over time <p>Applied Technologies</p> <ul style="list-style-type: none"> • Explore existing, new, and emerging tools, technologies, and systems to evaluate suitability for design interests • Evaluate impacts, including unintended negative consequences, of choices made about technology use • Analyze the role that changing technologies play in fabricating and welding contexts 	

APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Introduction to Welding Grade 11

Big Ideas – Elaborations

- **Design for the life cycle:** taking into account economic costs, and social and environmental impacts of the product, from the extraction of raw materials to eventual reuse or recycling of component materials
- **environmental impacts:** including manufacturing, packaging, disposal, and recycling considerations
- **technologies:** tools that extend human capabilities

APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Introduction to Welding Grade 11

Curricular Competencies – Elaborations

- **user-centred research:** research done directly with potential users to understand how they do things and why, their physical and emotional needs, how they think about the world, and what is meaningful to them
- **empathetic observation:** aimed at understanding the values and beliefs of other cultures and the diverse motivations and needs of different people may be informed by experiences of people involved; traditional cultural knowledge and approaches; First Peoples worldviews, perspectives, knowledge, and practices; places, including the land and its natural resources and analogous settings; experts and thought leaders
- **constraints:** limiting factors, such as task or user requirements, materials, expense, environmental impact
- **impacts:** including social and environmental impacts of extraction and transportation of raw materials; manufacturing, packaging, and transportation to markets; servicing or providing replacement parts; expected usable lifetime; and reuse or recycling of component materials
- **iterations:** repetitions of a process with the aim of approaching a desired result
- **sources of feedback:** may include peers; users; First Nations, Métis, or Inuit community experts; other experts and professionals both online and offline
- **appropriate test:** includes evaluating the degree of authenticity required for the setting of the test, deciding on an appropriate type and number of trials, and collecting and compiling data
- **share:** may include showing to others or use by others, giving away, or marketing and selling

APPLIED DESIGN, SKILLS, AND TECHNOLOGIES – Introduction to Welding 11

Content – Elaborations

- **forms of welding:** metal inert gas (MIG), tungsten inert gas (TIG), gas metal arc welding (GMAW)
- **inspection:** for example, coverage, penetration, strength
- **use of computers:** for example, computer-aided design (CAD), computer-aided manufacturing (CAM), computer numerical control (CNC)
- **interpersonal skills:** for example, professional communications, collaboration, ways of explaining visuals

Recommended Instructional Components:

- *Practical and Related Knowledge Modules combined with hands on training.*

Recommended Assessment Components:

Students will continuously self-assess their progress in all aspects of the welding program and journal the experiences throughout the course. A variety of self-assessment and rubric-based grades will be applied to practical work. Visual inspection of projects as well as continual safety observations and feedback.

Learning Resources:

- *Welder Training Program Kit (2010) BC Government and The Industry Training Authority.*
- *Modern Metalworking (2004) John R. Walker*
- *Modern Welding (2004) Andrew D. Althouse, Carl H. Turnquist, William A. Bowditch, Kevin E. Bowditch and Mark A. Bowditch*
